

storefront app — Public Marketing Site (commerce's future home)

Dual-register guide. Boundary law: [ADR-0008](#)

- [ADR-0010 §5](#).

Purpose & business responsibility

Aaj: public homepage + catalog DISPLAY (marketing). Kal (G6 → G5 → G2): orders, revenue, customers — the commerce side of the boundary. **Owns: presentation

- (future) revenue. NEVER owns production data.**

Models (all display-config today)

Model	Business	Note
HomePageConfig , HeroShowcaseCard , WhyUsCard , FooterLink , NavLink	homepage sections	singleton-ish config rows
Category	public cata- log grouping	display-only
FeaturedProduct	a showcased product CARD	free text — deliberately NO FK to production.Product. G6 will introduce the SKU entity that finally links sellable identity to the factory triple (product,color,size)

What records are written & by whom

listing views (listing_team role) write display rows via storefront services (master_service , image_service — croppable images). No money, no production writes, none ever (boundary).

How data flows / why / what breaks

listing_team edits cards → public pages render → (future) SKU (G6) → FinishedGood stock (G5) → Orders/revenue (G2) – Order↔Adda ONLY via stock, NEVER a direct FK (locked).

What breaks if bypassed: a price field on production.Product or an Order → Adda FK quietly couples revenue into manufacturing — the exact failure ADR-0008 exists to prevent. Any such PR contradicts an accepted ADR.

Common mistakes

1. No production imports beyond read-only display needs.
2. No price/revenue fields outside this app — ever.
3. Don't "quick-link" FeaturedProduct to production.Product — that's G6's SKU entity, designed properly, not a hotfix FK.

Django Learning Notes

- **Image handling** (`image_service` , croppable widget): uploads processed server-side; templates stay dumb.
- **Config-as-rows:** homepage layout DB-driven — owner edits without deploys.

Real factory example

Owner homepage pe "Cotton Round Neck Tee — Multicolor" card lagata hai (photo + badge 'Bestseller'). Factory mein wahi product `1-6` code se banta hai — aaj dono ka rishta sirf naam mein hai; G6 ke baad SKU unhe officially jodega, tab stock + orders aa payenge.
