

Adda lifecycle — the factory's unit of work

What an Adda is

EK product ka EK production batch. `3-PATTI-001` = “3 Patti ka pehla batch”. Code global-unique forever (ADR-0010). Har Adda apne product ke FLOW ko follow karta hai (WorkflowStage rows — owner flow editor mein order, rate, grouping, pay-eligibility set karta hai; TM-1 yahin tracking mode laayega).

The walk

START (1 field — product) → stage records bante hain → LAYERING: rolls attach (weight verify), complete par leftover weigh-in MANDATORY → CUTTING-PATTERN: evidence (photos/video) → CUTTING: size breakup, bundles, workers report color/size/qty (pehli real quantities; durations auto from timestamps — manual duration is banned) → BARCODE-GEN: (adda,color,size) seq ranges — printed payload PERMANENT → COMPLETE → settlement queue → ADST → cash.

Reopen rules

Stage reopen allowed for corrections — JAB TAK paisa na bana ho. Settlement-credited stage: reopen refuses, names the ADST → reverse first. Reopen voids era-A allocations (PAY-3) but NEVER settlement lines.

Where to watch it

Adda dashboard + workspaces today; G4 Adda-360 (soak instrument) will compose production + operations + money on one page — all the data already exists.
