

accounts app — file-by-file GUIDE (identity + RBAC foundation)

Business view: <config/accounts/README.md>.

File	What
<code>models.py</code>	custom User (email login) · Role(+extra_roles M2M) · SidebarItemRule (RBAC relocated here 2026-06 — foundation owns access)
<code>services/permission_service.py</code>	★ user_has_perm/_has_role + MENU REGISTRY (sidebar declarative; menu+URL ek saath gate)
<code>services/auth_service.py</code>	OTP issuance
<code>services/user_service.py</code>	user-provisioning invariants (no signals)
<code>views.py</code>	FILE MAP at top: OTP login/verify · user CRUD · rate-limited password login · signup(pre-provisioned) · reset
<code>urls.py</code>	mounted at /app/
<code>templates/accounts/</code>	base.html ★ (THE design system: tokens, components, money-family canonicals) + auth pages

Foundation-purity: core+accounts import NO domain app (CI gate 1/4). Dots: har request → middleware(sidebar rules) → permission_service → view.

Topics yahan use hote hain — kahan padhein

Har concept ka official link + “is project me kahan” mapping:
