

PENDING BACKLOG — everything still to do, one place (2026-06-12)

THE consolidated open-items list. Big-picture order lives in [ROADMAP REVIEW POST C1 2026 06 11.md](#) (canonical roadmap); this file gathers EVERY pending item — large and small — with its source. Update this file when an item ships; never delete, strike.

0) Blocking NOW — deployment decisions (owner)

Item	Detail	Source
VPS provider + size	~2 vCPU/4GB start	deploy/README
Domain	Caddy/TLS + ALLOWED_HOSTS	deploy/README
Backup provider	Backblaze B2 vs Cloudflare R2 (restic)	deploy/README
DB-init	FRESH production DB recommended — migrating dev carries test Addas + demo ADST settlements into append-only financial history forever	ARCH_READINESS_REVIEW §expensive-after-data

1) Deploy week (with/just after the deploy session)

- P4 runbook entries: worker password-reset procedure; phone session-lifetime setting; Hinglish one-page training cards per persona (worker card = 5 lines). (owner workflow audit)
- Observability bundle live (error reporting — stack has the seams).
- Backup → restore FIRE DRILL on the real VPS (never rehearsed end-to-end).
- Frontend: verify the 6–8 DataTables lists once on real phone hardware.

2) During soak (riding alongside)

- **G4 Adda-360 thin slice** — read-only page; THE soak instrument; first consumer of ADR-0009 read rules. (locked L6)

- **TM-1 Tracking Mode (Manual/None)** — week 1–2; D-T1 storage decision at build; H1/H2/H4 rules; **TM-1×P2 interaction: make** `pending_report_workers` **tracking-mode-aware** (readiness review §3).
- SOAK_TRACKER.md evidence log (feeds the two soak gates below).
- During-soak UI friction list (collect real, don't pre-polish): size-hint after product create · settlement-queue → workspace nav link · settlement detail snapshot table on phone (pre-existing side-scroll) · login-page first-render flash.

3) Soak-GATED (forbidden before soak passes)

- **ADR-0007 deletion PR:** remove `LEDGER_CREDIT_AT_ALLOCATION` lever + era-A allocation path + un-pin the 8 lever-regression test classes.
- MissingPiece settlement **pre-fill** (observe real variance patterns before automating their entry; the module itself isn't gated).

4) Feature phases (locked order — details per phase sheet in the roadmap)

1. **MissingPiece** (+case lifecycle principle locked; barcode-free §5A)
 2. **Alter/Rework** — design OPENS with the rework-pay decision; work records case-scoped (ADR-0010 §4); WST uniqueness stays
 3. **G1 material costing** — material read-model (derived) + **costing-era stamp** + leftover-re-use UI (mobile-first) + unpriced-roll worklist
 4. **G3 variance valuation** (needs MissingPiece + G1)
 5. **G6 product/SKU master** — BEFORE any G5/G2 (owner-locked); SKU entity decision is the keystone
 6. **G5 finished-goods stock** — ledger-discipline from birth; packing stage (archetype F) decision
 7. **G2 orders/revenue** — commerce side only; Order → Adda FK banned forever
 8. **Reporting (full)** — after lifecycle modules; era labels mandatory
 9. **G7 planning/MRP-lite** — last
- **TM-2 (Barcode/Both)** — ONLY via the dedicated Barcode/Traceability review: piece model born FROM (adda,seq) ranges (ADR-0010 §3), H3 hybrid reconciliation, H5 scan attribution.

5) Parked tech debt (touch-time / scheduled)

Item	When	Source
F7 assignable pool (= Stage.access_by_skill ∪ management, active)	direction LOCKED; build when access work next opens	validation F7
D-T5 workspace visibility (masters vs helpers see planned qty)	F7 family	TM requirement §9
mypy ratchet drift (257 errs)	next services-touching PR	readiness review
Frontend B-scope: legacy-page CSS migration, button-NAME unification, DataTables → data-label conversions	post-soak / touch-time	consolidation review (archived)
Stage-panel partial splits + JS → static extraction	when next forced; pairs with WhiteNoise work	frontend audit Phase 9
REMEDIATION_PLAN phases 4–13 (god-files, M4 cycle-break, logging)	parked; import-linter: restate WSC.settlement_line as NAMED exemption	REMEDIATION_PLAN
docs/PAGES + docs/FLOWS skeletons	fill per-page as screens are touched	doc audit gap list
ARCH_READINESS_REVIEW → archive	after soak passes	doc audit
Per-worker cross-Adda verified-qty rollup screen	only if asked; data derivable	readiness §1
Period-close concept · retention policy for append-only tables	named, far	foundation audit §C

6) Standing rules that travel with ALL of the above

Mobile-first (rule 11, every UI review documents 360/768/1280) · honest-NULL · backfill known facts only · append-only corrections · single-writer gates must stay green · every new phase opens by reading its locks (ADR 0008/0009/0010, R1, TM requirement).
